Dr. Miller,

Paul and Brian asked me to send you one of our Prolift professional education deck that includes an overview of material science. You can download the presentation by going to this

link: <https://www.yousendit.com/download/MFo3a3ZLV3JEbUpjR0E9PQ>.

The last section starting on slide 13 covers material science.

Please let me know if you have any questions.

Jennifer

Subject: Re: help

Dude, I may need help but I'm not that sad. I am giving a lecture on the topic I have all the current papers and am keenly aware of the changes. I just wanted some stuff for historical perspective. I also was hoping for images to back up the discussion. I guess I will have to forgo any discussion of partially absorbable mesh and focus on other companies developments. Like surface area changes and meshes to reduce degradation..... The other companies seem to be able to part with a few images without violating rules.....I'm just sayin'

I also am speaking on single incision slings and could use some images of those. Too bad again since AMS and Bard are submitting some

If you come up with any images of your products, etc or your data, I would be happy to include it along side the other companies stuff

Let me know

Dennis

Subject: RE: help

Hey Dennis,

Would love to help you out with slides but we now live in a new world. Everything we send out has to be copy approved. I can't even pull slides out of a deck (or send you a deck knowing that you will do this) in this new world. Let me see if I can help in other ways...

As I am sure you know, the world you knew 7-10 years ago on AMID classification is longer even relevant to some extent. What people think they know about mesh is changing. A few years ago people thought that if you made a mesh that had a monofilament construction and had large pores that it would be fine. In the last few years that has changed

to a discussion about the density of the mesh and its weight. In the next year or two it is going to change further with more discussion on topics like partially absorbable mesh, bridging fibrosis, and stress shielding.

If you look at the IUGA website and go to the 2010 annual meeting, you will see the Abstract book. A number of these talks from Ozog, Moalli, etc. are up there and can be used as a reference and as a starting point for discussion. You may even be able to get some slides from these authors if you know them...

Hope this helps!

Best, Brian

Subject: help

Hi Guys,

I am wondering if you guys can help me. I think I told you I have 4 lectures to give at this meeting in Baltimore. I am not prepared in the least. One of them is called mesh engineering –where are we going? It is a total pain and not exactly in my wheelhouse. Do you have any slides or other materials that I can use. Obviously, this will be non-proprietary and I certainly will not be comparing brands of current mesh. Even the old slides that have the old AMID classification and the electron microscopy pictures would be helpful. Anything new that you can share is great too. Anything at all is a help. Unfortunately, I need it all on short notice as well

Sounds good. I will also be available early and it would be nice to meet right after work. Maybe even as early as 5pm. How about the Harbor House? I was looking it up and just made a reservation for 4. So if that's okay, we are set

Regards,

Hey Dennis!

Paul and I are looking forward to seeing you tomorrow night in Milwaukee. Did you have a restaurant in mind? Also, let us know what time you would like to go out to dinner. We are flexible, since we are taking a flight that gets us in early. Looking forward to it!
